# COUNTER CULTURES

## Your Business, *Fully Connected*

WEBSITE · DASHBOARD · CRM · AI

Untold Works × Counter Cultures

April 7, 2026

01 TODAY

# Where Things Are Now

## What Happens Now

- **Squarespace** works as a digital brochure — people see products, but inquiries don't feed anywhere.
- **WhatsApp, email, walk-ins** come in separately — no central place to track them.
- **Odoo** has customer data and sales history, but it's disconnected from the website and messaging.
- **Orders and deliveries** tracked in Roger's head and WhatsApp threads — no status tracking.
- **No marketing:** no SEO, no blog, no social media, no way for new people to discover you.

## What Gets Lost

**The problem isn't the tools — it's that they don't talk to each other.**

A customer inquires on WhatsApp at 2am. Roger doesn't see it until morning. Someone fills a form on Squarespace and it vanishes into email. An order ships from the manufacturer but nobody updates the customer. Valuable leads, data, and relationships slip through the cracks.

02 INTELLIGENCE + VISION

# One Platform, AI-Powered

### Website Chatbot

A customer visits at 11pm looking for a TOTO toilet. The AI knows your entire catalog — products, prices, brands. It answers in Spanish, suggests alternatives, asks about their budget, and captures their contact info.

Monday morning, that lead is in your dashboard, warm and qualified.

### Dashboard Assistant

Roger types: *"How did we do last month?"*

The AI pulls from Stripe, CRM, and pipeline data. "12 new leads, 3 deals closed, $87,000 MXN in revenue. Most popular: bathroom faucets." It drafts posts, writes blog content, and helps compose quotes.

## Everything Connects to One Platform

| | | | |
|---|---|---|---|
| Website<br>**Discovery + Leads** | Dashboard<br>**Command Center** | Google Drive<br>**Data Layer** | WhatsApp<br>**Conversations** |
| Stripe<br>**Payments** | AI<br>**Chatbot + Assistant** | Social<br>**IG + Facebook** | Blog + SEO<br>**Organic Growth** |

03 SYSTEM 1 OF 3

# The Website

**What the customer sees and interacts with.** This replaces Squarespace with a custom-built, bilingual platform that actually captures leads and drives sales — not just looks pretty.

## What's On It

- → **20+ bilingual pages** — EN/ES, professional design, Dark Botanical aesthetic
- → **491 real products** with 1,019 images, filterable by brand, category, price, finish
- → **Product configurator** — show all available finishes, sizes, variants. "This faucet comes in 14 finishes."
- → **Brand showcase pages** — Kohler, TOTO, BRIZO, California Faucets, etc.
- → **Blog** for SEO content — guides, brand stories, project showcases

## How It Captures Leads

- → **WhatsApp button** — one tap from any page, their preferred channel
- → **Contact forms** — general inquiry, project-specific, all feed CRM
- → **Showroom booking** — schedule a visit, auto-confirmed
- → **Trade program application** — architects, designers, contractors
- → **AI chatbot** — answers questions 24/7 in EN/ES, captures contact info automatically

Every form, every chat, every WhatsApp tap → a lead in Google Sheets → visible in the Dashboard.

04 SYSTEM 2 OF 3

# The Dashboard

**Where Roger runs the business.** 21 modules across Sales, Marketing, Analytics, and Operations — organized into one sidebar. Two-view pipeline (Sales View + Operations View) so the same deals flow from winning to fulfillment without switching tools.

### Sales & Pipeline

- All leads in one place (website, WhatsApp, walk-in)
- **Two-view pipeline:** Sales stages + post-sale Operations stages
- Deal panel with Line Items, Payments, POs, Shipments, Financial Summary tabs

### Finance Dashboard

- Revenue, outstanding invoices, manufacturer payables, avg margin — KPI cards
- Per-deal P&L: money in, Stripe fees, manufacturer costs, net margin
- Overdue alerts + one-click WhatsApp payment reminders

### Document Workstation

- **Smart Forms:** Quotes, Invoices, POs, Delivery Receipts — pre-filled from deal data
- Live preview: internal view (margins) vs. customer view (clean)
- One-click: Quote → Invoice → POs (auto-split by brand)

### Shipment Tracker

- Multi-brand PO tracking: 3 manufacturers → 3 shipments → 1 delivery
- Status timeline: Shipped → Customs → At CC → Inspected → Delivered
- Inspection workflow + one-click WhatsApp customer updates

### Content & Marketing

- Blog manager, social media, email campaigns, content calendar
- Post to Instagram + Facebook directly via Meta API
- Product catalog management + weekly review

### Stripe + AI + Drive

- **Stripe:** invoices, payment links, payouts, customer management
- **AI:** "How did we do last month?" — drafts posts, reports, quotes
- **Drive:** file browser, Master Price List, images, contracts

05 SYSTEM 3 OF 3

# Google Drive — The Data Layer

**The database underneath everything.** Google Sheets acts as your CRM. Google Drive stores your files. The website reads from it. The dashboard writes to it. It's the source of truth — and you already know how to use Sheets.

## Google Sheets = Your CRM

- **Products tab:** All 491 products — name, brand, price, category, images. Edit here, website updates instantly.
- **Leads tab:** Every inquiry from every channel. Name, email, phone, source, date, status.
- **Pipeline tab:** Active deals — customer, products, amount, status (Quoted → Paid → Ordered → Delivered).
- **Contacts tab:** Customer database. History, notes, purchase history. Migrated from Odoo.
- **Purchase Orders, Shipments, Deal Payments, Manufacturers** — new operational tabs powering the process engine.
- **Documents, Trade Apps, Newsletter, Bookings** — all separate tabs, all connected.

## Google Drive = Your Files

- **Product images** organized by category and brand
- **Invoices and quotes** from Stripe, stored automatically
- **Master Price List** — dealer costs, margins, MAP pricing across 11 brands
- **Contracts, specs, manufacturer docs**

**Why Sheets?** It's free, Roger already knows it, it's easy to view/edit manually if needed, and it connects to everything via Google APIs. No extra CRM subscription.

06 CONTENT & MARKETING

# How You Build Your Brand

Right now Counter Cultures has zero online presence beyond Squarespace. This is how that changes — and how content becomes a lead engine.

## The Content Loop

① **Create in the Dashboard**

Blog post, Instagram photo, product showcase — write and compose directly in the dashboard. AI assistant helps draft content, suggest topics, write captions. Roger approves.

↓

② **Publish Everywhere**

**Blog:** bilingual EN/ES, published to website. **Social:** Instagram + Facebook via Meta API (free). **Newsletter:** monthly email to subscribers via Resend. One piece of content, three channels.

↓

③ **People Discover You**

**SEO:** Blog posts rank for "luxury bathroom San Miguel." **AEO:** AI assistants (ChatGPT, Gemini, Claude) recommend Counter Cultures because your content exists. **Social:** Instagram followers click through to your site. This is the discovery engine from slide 6 — it runs on content.

↓

④ **They Become Leads**

Visitor reads blog → browses catalog → WhatsApp or chatbot → lead in CRM. The same pipeline you saw in slides 8–10 kicks in. Content isn't marketing for marketing's sake — it's the top of your sales funnel.

## Content Types

### Blog Posts (SEO + AEO)

"Best kitchen faucets for Mexican homes" · Brand stories · Product guides · Project showcases · Design trend roundups. Written in dashboard, AI-assisted, published bilingual.

### Social Media (IG + FB)

Product photos from your 1,019-image catalog. Before/after project shots. New arrival announcements. "Just installed" customer stories. Posted from dashboard → Meta API → live.

### Newsletter (Resend)

Monthly email to subscribers: new products, completed projects, promotions. Captured from website footer + trade program. Free up to 3,000/month.

### Website Updates

New collection pages, updated brand showcases, seasonal promotions. Edit in Sheets or dashboard → website updates instantly. No developer.

07 CUSTOMER JOURNEY

# How Customers Find You and Buy

① **They Discover You**

**SEO:** "luxury faucets San Miguel de Allende" — your blog and product pages rank. **Social:** They see your kitchen remodel post on Instagram. **AEO:** An AI assistant recommends Counter Cultures when asked about premium showrooms in Mexico. **Referral:** An architect from your trade program tells a client.

↓

② **They Land on the Website**

Bilingual, professional, custom-built. 491 products filterable by category, brand, price, finish. Not a template — this is Counter Cultures' aesthetic.

↓

③ **They Find a Product They Love**

Product page shows all finishes and sizes. Or the AI chatbot at 2am in Spanish helps them find exactly what they need and captures their info.

↓

④ **They Reach Out**

WhatsApp button (one tap), contact form, showroom booking, trade application, or chatbot auto-capture. Multiple paths, same destination.

↓

⑤ **They Become a Lead**

Contact info flows into Google Sheets CRM automatically. Shows in the Dashboard. Roger gets notified. Nothing lost, nothing forgotten.

08 SALES PROCESS

# From Inquiry to Payment

What happens once a lead comes in — step by step, from Roger's perspective.

① **New Inquiry Arrives**

Contact form, WhatsApp, walk-in, or chatbot capture — it appears in the dashboard immediately. The system tags the source so Roger knows how they found him. If it came from the AI chatbot, it already includes the customer's project details and product interests.

② **Roger Reviews + Responds**

Dashboard shows who they are, what they want, how they found you, their full message, and any chatbot conversation history. Roger responds via WhatsApp — their preferred channel in Mexico — or by email. He discusses the project, walks through options, maybe suggests a showroom visit.

③ **Build the Quote — Document Workstation**

Roger opens the **Document Workstation** from the deal. Smart Form pre-fills customer info + products from the catalog with real dealer costs from the Master Price List. He sees a live preview — internal view shows per-item margins; customer view shows a clean branded quote. One click saves the PDF to Drive. Pipeline status: **Quoting**.

④ **Convert Quote → Invoice via Stripe**

**One click: "Convert to Invoice."** The Document Workstation generates a branded Stripe invoice from the approved quote — line items, pricing, payment link all carry over. Supports split payments: 50% deposit + 50% on delivery, Net 30 for trade clients, or custom installments. Customer receives via WhatsApp or email. Pipeline status: **Quoted**.

⑤ **Customer Pays → POs Auto-Generate**

Stripe processes the payment (3.6% + $3 MXN per transaction). Pipeline auto-updates to **Deposit Received** or **Paid**. Finance dashboard shows it instantly. Then: **"Generate POs"** — the system auto-splits the order into one Purchase Order per brand (Brizo PO, TOTO PO, Cal Faucets PO), each at dealer cost. Roger reviews and sends to manufacturers.

09 BACKEND OPERATIONS

# From Order to Doorstep

The full fulfillment process. AUTOMATED = the platform handles it. MANUAL = Roger or team does it.

01

### POs Auto-Generated by Brand

Dashboard auto-splits the deal into one PO per brand (CC-PO-2026-001 for Brizo, CC-PO-2026-002 for TOTO). Roger reviews, sends to manufacturer via portal or email.

AUTO PO GENERATION | MANUAL — ROGER SENDS

→

02

### Confirm + Record Payment

Manufacturer confirms. Roger updates PO status, records manufacturer payment (date, amount, method, reference). Finance dashboard tracks: PO paid or outstanding.

MANUAL — ROGER CONFIRMS | AUTO FINANCE TRACKING

→

03

### Track Multi-Brand Shipments

3 brands = 3 shipments on 3 timelines. Shipment Tracker shows each one: carrier, tracking, ETA, customs status. Convergence view: "Waiting for 1 more shipment."

MANUAL ENTRY | AUTO CONVERGENCE TRACKING

04

### Update the Customer

WhatsApp message: "Your BRIZO faucet has shipped — expected Thursday." Template message, one click to send.

AUTO TEMPLATE — ONE CLICK

05

### Delivery + Deal Close

Roger inspects, confirms quality (photos to Drive). Delivers to customer. If 50/50 deal: balance invoice auto-triggers. Deal completion checklist: all delivered ✓ all paid ✓ all POs settled ✓ → **Complete.**

MANUAL CONFIRM | AUTO CHECKLIST + NOTIFY

06

### Follow-Up

Auto follow-up after 7 days: "How does it look?" Request for review/photo. Marketing content. Ask for referrals.

AUTOMATED FOLLOW-UP

**Roger does the human work** (manufacturer relationships, quality checks). **The platform handles the rest** (status tracking, customer notifications, follow-ups, reporting).

10 PRODUCT OPERATIONS

# Keeping 491 Products Current

11 brands. Prices change. Collections launch. SKUs get discontinued. Here's how updates flow from manufacturer to customer's screen.

## The Update Flow

① **Manufacturer Sends Update**

New price list PDF, new collection launch, discontinuation notice — arrives via email. Roger uploads it to Google Drive. MANUAL

② **AI Parses + Compares**

Dashboard AI reads the price list, compares against the Master Price List (SKU, MSRP, Dealer Cost, Status). Flags what changed: *"BRIZO updated 23 prices. 5 increased, 2 new SKUs, 1 discontinued."* AUTOMATED

③ **Roger Reviews + Approves**

Dashboard shows a clear diff: old price vs. new, margin impact, new products to add. Roger approves or adjusts retail pricing. MANUAL DECISION

④ **Google Sheets Updates → Website Updates**

Approved changes write to Google Sheets. Products tab and Master Price List sync. Website reflects new prices, new products, removed items — **instantly, no developer needed.** AUTOMATED

## What the Dashboard Flags

- ! **Price changes:** Dealer cost went up but retail price hasn't been updated — your margin is shrinking
- ! **Discontinued:** TOTO stopped making this model — 2 active quotes reference it
- + **New products:** California Faucets launched a new collection — 8 SKUs ready to add
- ↻ **New finishes:** Kohler added Matte Black to 12 existing faucets — update variants
- $ **Below MAP:** 3 products priced below Minimum Advertised Price — compliance risk

**The Master Price List** already exists — SKU, MSRP, MAP, Dealer Cost, Margin % across all brands. It's the backbone. Manufacturer updates sync against it. Roger always knows his real margins.

**One edit, everywhere at once.** Change a price in Sheets → website updates, dashboard reflects it, active quotes get flagged if affected. No more "the website says one price but we quoted another."

# Following the Money

Money in from customers. Money out to manufacturers. The spread is your profit — and now you can actually see it.

## Money In — What the Platform Tracks

$ **Customer Payments via Stripe**

Every invoice, every deposit, every final payment — logged automatically. Finance sees it the second it clears. No checking the bank and cross-referencing WhatsApp. AUTOMATED

$ **Deposits + Partial Payments**

Large projects get split: 50% deposit, 50% on delivery. Stripe tracks both. Pipeline shows balance remaining per deal. No mental math. AUTOMATED

$ **Stripe → Bank Payouts**

Stripe deposits to your Mexico bank account on schedule. Dashboard shows pending payouts, completed payouts, and payout history. AUTOMATED

## Money Out — Manufacturer Payments

$ **Pay Dealer Cost to Manufacturer**

Each PO tracks: payment date, amount, method, reference number. Finance records it in the **Manufacturer Payables** table. The system auto-calculates per-deal P&L: revenue − Stripe fees − manufacturer costs − shipping = **net margin**.

MANUAL — FINANCE RECORDS | AUTO MARGIN CALC

## The Finance Dashboard BUILT

- ✓ **KPI cards:** Revenue This Month, Outstanding Invoices, Manufacturer Payables, Avg Deal Margin %
- ✓ **Outstanding Invoices table:** customer, amount, due date, days overdue — send reminder or mark paid
- ✓ **Manufacturer Payables table:** PO #, brand, amount, deal ref — record payment with one click
- ✓ **Per-deal P&L:** revenue, Stripe fees, manufacturer costs, shipping, net margin — visible the moment a deal closes
- ✓ **Margins by brand:** Which manufacturers are most profitable? Bar chart across all 11 brands
- ! **Cash flow summary:** Money In vs. Money Out this month, net position, overdue auto-escalation (7/14/30 days)

**What Finance does manually:** Verify bank deposits match Stripe payouts. Log manufacturer payments. Approve refunds. Handle tax reporting. Everything else — revenue tracking, invoice status, margin calculation, overdue alerts — is **automatic**.

**The big unlock:** Right now, nobody knows the real profit on a deal until weeks later. With dealer costs in the Master Price List and payments in Stripe, the dashboard shows margin *the moment a deal closes*. Roger knows which brands, which deal sizes, and which customer types are actually making money.

# Roger's Monday Morning

You open the dashboard with coffee. **Everything that happened over the weekend — and everything that needs your attention this week — is on one screen.**

## Sales + Leads

1. 3 new inquiries over the weekend. 1 from chatbot (already qualified), 1 WhatsApp, 1 contact form.
2. Maria — architect, boutique hotel project. Reply via WhatsApp, share BRIZO collection link.
3. Pipeline: $45,000 MXN across 8 active projects. 2 quotes need follow-up (sent 5+ days ago).

## Money + Orders

4. Lopez paid $15,000 MXN deposit on Friday. Finance sees it. Time to order from Kohler.
5. Hernandez faucets shipped — in transit, arriving Wednesday. One click → WhatsApp: "Your order is on its way!"
6. 1 overdue invoice: Garcia, $8,500 MXN, 7 days late. One-click WhatsApp payment reminder.

## Catalog + Content

7. BRIZO updated prices on 12 SKUs. Dashboard flagged: 3 margins dropped below 25%. Review + approve.
8. AI drafted an Instagram post: Sun Valley Bronze collection showcase. Review. Approve. Goes live.
9. AI weekly report: 5 leads, 2 quotes, 1 closed deal, $32K collected, gross margin 38%, 2 deliveries this week.

**30 minutes with coffee.** Every lead answered, every order tracked, every payment visible, every margin checked. Then Roger goes to the showroom and does what he does best — talk to customers about beautiful products.

13 PROGRESS

# Where We Are Today

Everything you just saw? The structure is built. Here's exactly what's ready and what needs your real data.

### Website — Built ✓

- ✓ 20+ bilingual pages, messaging overhauled (10-second test)
- ✓ 491 products, 1,019 images, faceted filter system
- ✓ AI chatbot (catalog-trained, bilingual)
- ✓ Contact, booking, trade forms → CRM
- ✓ Blog engine + SEO + brand pages redesigned
- ✓ WhatsApp buttons, mobile-optimized header

### Dashboard — 21 Modules ✓

- ✓ Two-view pipeline (Sales + Operations)
- ✓ Finance dashboard (KPIs, payables, P&L)
- ✓ Document Workstation (quotes, invoices, POs)
- ✓ Shipment tracker + Stripe connected
- ✓ Content, social, blog, email campaigns
- ✓ AI assistant, Drive browser, Odoo sync

### Google Drive — Structured ✓

- ✓ CRM Sheets: Products, Leads, Pipeline, Contacts
- ✓ Operations tabs: Purchase Orders, Shipments, Deal Payments, Manufacturers, Documents
- ✓ Master Price List (SKU, cost, margins)
- ✓ Service account API connected
- ~ Currently mock data — needs Odoo extract

### What We Need to Flip the Switch

- ✓ **Stripe Mexico** — connected, payments + finance dashboard wired
- → **Odoo extract** — contacts, sales history, invoices into Sheets CRM
- → **WhatsApp Business API** — register number with Meta (~1 week)
- ✓ **Messaging framework** — 10-second test pass, copy overhauled sitewide
- → **Google Workspace** — connect for Drive CRM, email, calendar sync
- → **Meta Business Suite** — IG + FB accounts for social posting

# How We Get There

### Phase 1: Data + Deploy

Weeks 1–2

Extract Odoo → Google Sheets CRM (contacts, sales history, invoices). Import Master Price List with real dealer costs across all 11 brands. Wire 491 products with confirmed pricing. Connect Stripe Mexico to bank. Deploy live to countercultures.com.mx.

### Phase 2: Operations Live

Weeks 3–4

Sales pipeline operational: leads → quotes → Stripe invoices → payment tracking. WhatsApp Business API live for customer messaging. Order fulfillment pipeline active (Ordered → In Transit → Delivered). Finance dashboard showing real revenue, margins, and payouts. AI chatbot trained on live catalog.

### Phase 3: Discovery + Growth

Weeks 5–6

First 10 blog posts published (bilingual) for SEO + AEO. Instagram + Facebook connected for social posting from dashboard. Trade program accepting applications. Newsletter capture via Resend. Replace stock images with real product photography. Organic search traffic starts building.

### Phase 4: Automate + Compound

Weeks 7–8+

AI handles first-response 24/7. Automated shipping notifications via WhatsApp. 7-day post-delivery follow-ups. Price change detection on manufacturer updates. Margin alerts. Weekly AI-generated business reports. SEO compounds — more content = more traffic = more leads = more revenue.

15 INVESTMENT

# What It Costs to Run

| Platform | What It Does | Cost |
|---|---|---|
| **Google Workspace** | Email, Drive, Sheets CRM (2 users) | ~$14/mo |
| **Netlify** | Website hosting (Pro) | $19/mo |
| **Stripe** | Payment processing | 3.6% + $3 MXN/txn |
| **WhatsApp Business API** | Customer messaging | Free (business-initiated) |
| **Claude AI (Haiku)** | Chatbot + AI assistant | ~$10-20/mo |
| **Resend** | Email + newsletters | Free (3k/mo) |
| **Meta Graph API** | IG + Facebook posting | Free |
| **Domain** | countercultures.com.mx | ~$3/mo |
| **TOTAL (without Stripe %)** | | **~$35-45/mo** |

## What This Replaces

- ✗ **Squarespace ($33/mo)** — static brochure, no lead capture, no CRM
- ✗ **Odoo** — disconnected CRM, no website integration
- ✗ **Manual tracking** — leads in WhatsApp, orders in Roger's head, margins on a calculator

## What You Get

- ✓ Lead capture that actually works (24/7 chatbot, forms, WhatsApp)
- ✓ Real-time financial visibility (revenue, margins, payouts)
- ✓ Automated order tracking + customer updates
- ✓ A discovery engine (SEO, AEO, social) that grows over time
- ✓ One dashboard for everything — not 5 disconnected tools

> **~$35-45/mo** for a complete business platform with 21 dashboard modules, AI, and a document workstation. Every dollar in Stripe fees = a deal that closed itself.

COUNTER CULTURES × UNTOLD WORKS

# Let's Build This

### ROGER'S TO-DO

1. **Product image review** — 64 products live, many using stock/duplicate photos. We need real product shots or manufacturer images for each SKU
2. **Walk the site** — review copy, pricing, brand descriptions at *countercultures.netlify.app*. Messaging has been overhauled — flag anything off
3. **Connect Google Workspace** — give us access so Drive CRM, email, and calendar sync go live
4. **Confirm contact details** — phone number and email are placeholders. Lock in real showroom number + domain (countercultures.mx vs .com.mx)
5. **Review the Master Price List** — confirm dealer costs + margins for all 491 products
6. **Delivery timelines** — we need typical lead times by brand/category for the site ("Most orders in X weeks")

### DONE + NEXT

- ✓ **Stripe connected** — payments + finance dashboard wired
- ✓ **Messaging overhauled** — hero, brand bar, footer, all pages pass 10-second test
- ✓ **Process engine + Document Workstation built** — quotes, invoices, POs, shipment tracking
- → Replace stock photography with real product images (once Roger provides them)
- → Wire Google Workspace into CRM, activate live chatbot + order tracking
- → Launch SEO, AEO & content engine for discovery

### SINCE THE LAST DECK (APR 3)

Built: operational process engine, document workstation, finance dashboard, shipment tracker, two-view pipeline. Overhauled all site messaging (10-second test). Redesigned brands page. Polished typography + mobile header.
**Remaining gap:** stock images + real contact details.

> **The platform is built. Your inputs are what make it yours.**

Questions? Let's talk through them now.
