

Counter Cultures — NEW PLAN (Lean on Odoo)

Prepared for our meeting · Thursday, May 28, 2026

The frame

Odoo is the single hub for the business — sales, customers, invoices, payments, purchasing, inventory, WhatsApp, email. **The website is the storefront customers shop.** There is no second “dashboard” to keep in sync.

What we keep · move · retire

Keep (real value, not redundant)	Move into Odoo (it does this natively)	Retire (redundant)
Customer website: SEO, bilingual catalog, design	Quotes, orders, customers, vendors	Dashboard’s duplicate order / customer screens
Customs / pedimento workflow (Odoo has no equivalent)	Invoices, payments, AR / AP, P&L	Dashboard AR / AP / P&L mirror screens
Antonina’s finance rules (as the Odoo setup spec)	Facturas / CFDI (Odoo Mexican localization + PAC)	Half-finished custom factura logic
Website lead capture	Stripe payments (Odoo native)	Custom Stripe → Google Sheets money path
	WhatsApp + Email Marketing (Odoo native)	Custom WhatsApp plumbing; the Klaviyo question
	Google Drive (Odoo Documents / connector)	The broken portal Drive screen

Who does what

You (Josh)	Odoo specialist (Rodger’s hire)	Rodger (owner)
Finish the website	Get admin access working (the blocker)	Decide: launch model + storefront custom vs. Odoo Website
Connect website → Odoo (quotes/orders flow in)	Configure Sales / CRM / Accounting / Purchase / Inventory	Find, hire + pay the Odoo specialist
SEO, 301 redirects, cutover (DNS, domain, email)	Mexican localization + CFDI/PAC, Stripe payments	Transfer access + ownership (below)
Retire the redundant dashboard screens cleanly	Load products + prices; seats for Javier & Ian	Name who owns the system after handoff
	Google Drive app, WhatsApp, Email Marketing	
	Rebuild keep-logic as Odoo automation (Santander→factura, bank fees, shipping routing, pedimento)	

The one thing blocking everything: Odoo admin access

No one can configure Odoo today. The admin login is **roger@countercultures.com.mx**, and the password-reset email goes to Rodger’s inbox. Nothing on the Odoo side (and no Odoo expert) can start until this is solved. Fastest path: log in via the **odoo.com subscription owner → My Databases → Connect**, or reset and create a dedicated admin user. **This is item #1 when we meet.**

Access + ownership to transfer (so handoff is clean)

Odoo password (rotate it), Google Drive / CRM data, Stripe, Resend (email), Netlify (website), Meta / WhatsApp, domain registrar. Each needs a named owner. And one decision only Rodger can make: **who is the technical point person after handoff.**

Honest timeline

Website and Odoo build run in parallel, plus onboarding the specialist. Realistic July target: a **polished soft launch** (browse + request a quote), with full card checkout following shortly after. Launch clean and small beats broad and broken.

Decisions needed from Rodger

1. Find, hire + budget the Odoo specialist (your hire — I'll work alongside them, not manage them).
2. Solve Odoo admin access (item #1 above).
3. Keep the custom storefront, or move even that into Odoo Website? (Trade-off: custom = stronger SEO/design, but someone must maintain it; Odoo Website = one less thing to own after handoff.)
4. Name who owns the system after handoff.
